

Lavenda[®]

Metal Fascia Board

Versatility. Stability. Consistency

Benefits & Features

Lavenda Metal Fascia is a functional and yet decorative fascia board which incorporates pre-painted galvanized steel for its strength, durability and easy installation. It can be combined with all types of Trusses & Roofing Materials to form a complete roof system. Apart from being environmental friendly, steel is readily available and much more stable in cost as compared to other materials.

Consistency

Steel is stable and uniform material and can be easily roll formed into the shape consistently to ensure excellent finishing. Hence, no inconsistent shape of warped, bow and twisted when exposed to weather.

Non-Combustible

Steel do not burn, deteriorate or crack

Durability

Steel do not attract termites, ants and other insects. With galvanizing protection, it has longer life span compared to other materials.

Lightweight

With unique design, metal fascia is much lighter compare to timber or fiber cement fascia board. Hence, it is easier to handle during installation process.

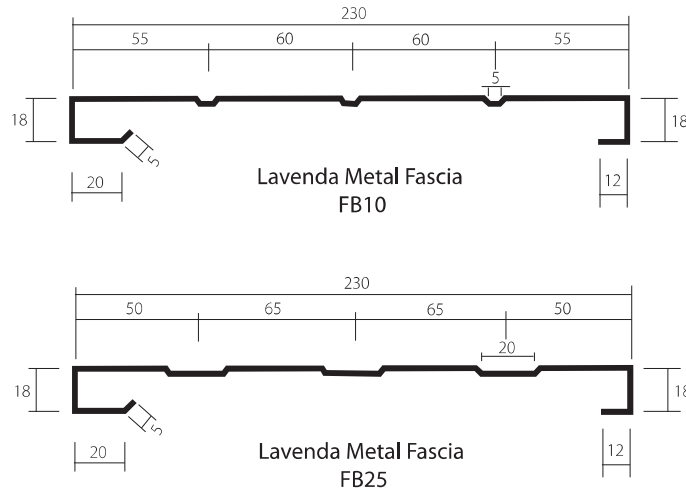

Anti-Corrosion

All components are zinc/aluminium alloy or zinc coated which will protect the steel against corrosion. Zinc will act as sacrificial anode to protect the edge by scarifies itself to heal the cut edge and all coating meet the standard of AS1397 or JIS G3302.

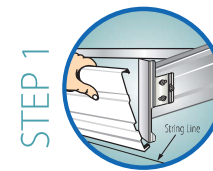

Environmentally Friendly

All waste material can be recycled and the production process is using cold roll forming process which is low energy consumption and clean.

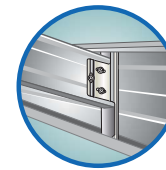

Technical Specification

Installation Procedure

STEP 1
Run a string line from one end of rafter to the other and then fix the fascia bracket at each rafter and level it in line with string line.

STEP 2
Hook the Metal fascia to correct position by sliding it along the brackets and fasten it with self drilling screw.
